

DCN Co-Location Services

Introduction

If your business is looking for a secure and affordable Co-Location facility, turn to DCN for quality Co-Location and network access. DCN offers secure lockable cabinets ensuring customer equipment is safe and secure. DCN allows your organization to access DCN's high-reliability network in a secure environment and insures that your servers are properly maintained without the expense of dedicated infrastructure or staff.

Co-Location Service Offering

- Personalized combination locking cabinets
- DCN offers a highly efficient centralized UPS and diesel generator power designed to meet the specific needs of the customers' hardware. Standard power is rated for redundant 20 or 30 amps with isolated power feeds standard for each cabinet.
- Electronic security allows physical access to your equipment 24 hours a day.
- A shared work space with console access to customer equipment.
- A concrete/brick facility rated to sustain tornadic conditions.

Temperature Controlled Environment

DCN's Co-Location space was constructed to meet and exceed the additional heat dissipation created in a Co-Location space. Environmental conditions will be monitored 24X7.

Battery Backup and Generator Power

DCN installed a data center quality UPS that resolves any power problems and supplies clean, continuous, uninterruptible power to customer's equipment. For added reliability and redundancy, customer equipment will be tied into DCN's diesel generator. All electrical wiring will be installed to comply with all industry standards.

Pricing Options

DCN offers both half or full cabinets depending on customer space requirements.

Pricing includes:

Lockable Cabinet 24"W X 84"H X 36"D

24 X 7 Customer Access,

Generator/UPS, and isolated power feeds to each cabinet.

Web based power monitoring capabilities.

24X7 Monitored Access

DCN's Data Center is monitored 24x7 with a CCTV video surveillance system. DCN also utilizes electronic identification which allows DCN to monitor individual access to the Co-Location space. DCN will monitor access to ensure security.

Access to DCN's WAN/Internet Service

Customers will also have direct connect access to DCN's redundant fiber optic wide area network services. Customers can choose from Ethernet, ATM/Frame Relay, DS1, DS3 or OCx connections to their WAN, as well as up to Gigabit Ethernet connections to DCN's internet service.

Additional DCN Services

Internet Bandwidth Management

Network Convergence has forced businesses to be more aware of bandwidth utilization over the internet. Web access to bandwidth utilization reports classifies customers Layer-7 traffic. Enabling customers to identify which applications are utilizing the most bandwidth on their internet connection.

Security/ Firewall Services / Virus Protection

In addition, customers will have access to the most up to date network based antivirus services. DCN will detect, quarantine, and eliminate viruses and worms in real-time. IDS (Intrusion Detection Service), IPS (Intrusion Prevention Services), as well as DDoS (Distributed Denial of Service) protection services will be provided as part of DCN's Managed VPN Service.

Access to Multiple Tier ISP's

Since the Co-Location equipment will be housed in the DCN POP (Point of Presence), customers will have access to multiple Tier I Internet service providers giving you the reliability and redundancy your business requires.

Mobile User Access

DCN can provision secure VPN access giving you access to customer equipment from virtually anywhere.

Redundant Power Feeds into Cabinet

For added reliability, customer equipment can be equipped with redundant power feeds.
